DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a chip-stack semiconductor device, classified in class 257, subclass 777.
- II. Claims 11-18, drawn to a manufacturing method of a chip-stack semiconductor device, classified in class 438, subclass 107.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the group I invention could be made by a materially different process. For example, selectivity forming the through electrode made of the conductive material linking a front surface to a back surface of the semiconductor chip to expose the conductive material, instead of forming the through electrode made of the conductive material linking a front surface to a back surface of the semiconductor chip by removing a back surface of the semiconductor chip partially in a thickness direction to expose the conductive material.

Because these inventions are distinct for the reasons give above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
